Forthcoming July 2002!

Theory and Applications of Long-Range Dependence

P. Doukhan, *Université de Cergy-Pointoise, France*
G. Oppenheim, *Université Paris-Sud, France*
M. Taqqu, *Boston University, MA*

The area of time series research has been one of considerable research activity over the past several decades. The essential ingredient — the notion of time-dependence — is required for measuring and then accurately predicting data to construct suitable models for diverse phenomena. This fairly self-contained volume, written by leading experts in their respective fields, especially focus on the theoretical concepts, methodologies, and practical applications pertaining to self-similar processes and long-range dependent phenomena.

Key features:

- Valuable tutorials
- Topics include the notion of self-similarity, limit theorems, fractional integration, parametric, semi-parameteric and non-parametric estimation, stochastic volatility, breakdown points and prediction
- A comprehensive treatment of multifractals
- Applications to telecommunications, economics, finance, hydrology and turbulence
- Practical methods for estimation, including wavelets, are described in a convenient way for the practitioner
- Numerous examples and illustrations.
- Extensive bibliographies.

In this outstanding state-of-the art treatment, the reader is provided with a global picture of an important subject with fascinating applications. Graduate students, researchers, and professionals in industry — among the many end users — will benefit from the first merger in book form of both theory and applications of self-similar processes and long-range dependence.

Approx 750 pp., 75 illus., Hardcover, ISBN 0-8176-4168-8

Preface

I. Probability
Taqqu – *Fractional Brownian Motion and Long-Range Dependence*
Molchan – *Historical Comments Related to Fractional Brownian Motion*
Doukhan – *Models, Inequalities and Limit Theorems for Stationary Sequences*
Ould Haye, Viano – *Limit Theorems Under Seasonal Long-Memory*
Surgailis – *CLTs for Polynomials of Linear Sequences: Diagram Formula with Illustrations*
Ho, Hsing – *A Decomposition for Generalized U-Statistics of Long-Memory Linear Processes*
Maejima – *Limit Theorems for Infinite Variance Sequences*
Pipira, Taqqu – *Fractional Calculus and Its Connection to Fractional Brownian Motion*
Decreusefond – *Stochastic Integration, Filtering with Respect to Fractional Brownian Motion*

II. Statistics
Giraitis, Robinson – *Parametric Estimation Under Long-Range Dependence*
Moulines, Soulier – *Semi-parametric Spectral Estimation for Fractional Processes*
Doukhan, Khezour, Lang – *Non-parametric Estimation Under Long-Range Dependence*
Deo, Hurvich – *Estimation of Long Memory in Volatility*
Kokoszka, Leipus – *Detection and Estimation of Changes in Regime*
Koul, Sutgailis – *Robust Estimation in Regression Models with Long Memory Errors*
Bhansali, Kokoszka – *Prediction of Long Memory Time Series*

III. Applications
Willinger, Paxson, Riedi, Taqqu – *Long-Range Dependence and Data Network Traffic*
Norros – *Large Deviations of Queues with Long-Range Dependent Input*
Henri, Zaffaroni – *The Long-Range Dependence Paradigm for Macroeconomics and Finance*
Mikosch, Starica – *Long-Range Dependence Effects and ARCH Modeling*
Montanari – *Long-Range Dependence in Hydrology*
Papnicolaou, Sølna – *Wavelet Based Estimation of Local Kolmogorov Turbulence*
Surgailis, Woyczynski – *Limit Theorems for the Burgers Equation Initialized by Data with Long-Range Dependence*

IV. Methodology
Abry, Flandrin, Taqqu, Veitch – *Self-Similarity and Long-Range Dependence Through the Wavelet Lens*
Taqqu, Teverovsky – *Graphical Equation of the Long-Range Dependence Parameter: A Survey*
Bardet, Lang, Oppenheim, Philippe, Stoev, Taqqu - *Semi-Parametric Estimation of the Long-Range Dependence Parameter: A Survey*
Bardet, Lang, Oppenheim, Philippe, Taqqu – *Generators of Long-Range Dependent Processes: A Survey*
Riedi – *Multifractal: From Global to Local Properties*
