

We begin with a comment related to the example of a separable differential equation that we discussed last class.

Example. After separating variables on the differential equation

$$\frac{dy}{dt} = -2ty^2,$$

we obtained the family of solutions

$$y(t) = \frac{1}{t^2 + k}$$

where k is an arbitrary constant.

For the initial condition $y(0) = \frac{1}{2}$ we have $k = 2$, and the solution is

$$y(t) = \frac{1}{t^2 + 2}$$

with a domain of $-\infty < t < \infty$.

For the initial condition $y(0) = -\frac{1}{2}$ we have $k = -2$, and the solution is

$$y(t) = \frac{1}{t^2 - 2}$$

with a domain of $-\sqrt{2} < t < \sqrt{2}$.

Keep the graphs that we produced with `FirstOrderExamples` in mind.

Trick question: What's the general solution to this differential equation?

Slope fields:

A **slope field** in the ty -plane is the geometric manifestation of a first-order differential equation

$$\frac{dy}{dt} = f(t, y).$$

The graph of a solution must be everywhere tangent to the slope field.

Example. Consider the differential equation

$$\frac{dy}{dt} = -2ty^2$$

that we studied last class.

The TargetPractice tool is a fun way to see how the slope field relates to the solutions of the differential equation.

Example. Consider the differential equation

$$\frac{dy}{dt} = y - t.$$

Using the computer to plot the slope field, we get

Important Special Cases:

1. $\frac{dy}{dt} = f(t)$

2. $\frac{dy}{dt} = f(y)$ (autonomous)

Typical Exam Problem:

Consider the following 8 first-order equations:

- | | | | |
|------------------------------|---------------------------------|----------------------------|----------------------------|
| 1. $\frac{dy}{dt} = t - 1$ | 2. $\frac{dy}{dt} = t + 1$ | 3. $\frac{dy}{dt} = y + 1$ | 4. $\frac{dy}{dt} = 1 - y$ |
| 5. $\frac{dy}{dt} = y^2 + y$ | 6. $\frac{dy}{dt} = y(y^2 - 1)$ | 7. $\frac{dy}{dt} = y - t$ | 8. $\frac{dy}{dt} = y + t$ |

Four of the associated slope fields are shown below. Pair the slope fields with their associated equations. Provide a brief justification for your choice.

Slope Field A

Slope Field B

Slope Field C

Slope Field D
