MATHEMATICS 124 B1: Calculus II
Spring Semester 2001
Instructor: Takashi Kimura
e-mail: kimura@math.bu.edu
Phone: (617)353-1486 Office: MCS 234

Lectures: MWF 1-2pm in CAS 522
Discussion Sections: M 4:00-5:00pm in CAS 201, M 3:00-4:00pm in CAS 221, Tu 8:30-9:30am in SOC B65, Tu 3:30-4:30pm in SOC B63, Tu 4:30-5:30pm in SOC B63

My Office Hours: To be announced.
Teaching Fellow (TF): Seth Falcon TF’s Office: MCS 250

Content: In this course, we continue to study the calculus of functions of one variable building upon the material from MA 123. This course covers integration techniques, improper integrals, volumes and areas, arc length, differential equations, sequences and series. The best way to see if you have mastered the material is to do the homework problems.

Web Page: This class Web page is located at the URL: http://math.bu.edu/people/kimura/Spring01/124/
Documents distributed in class, homework assignments, and related information will be posted there.

Homework: Homework will generally be assigned on Wednesday during class and due at the beginning of class the following week. Late homework will not be accepted. Students may discuss homework with each other (and are encouraged to do so) but all written work must be prepared independently. Remember that in order to receive full credit both your answer and reasoning must be correct (the same goes for exams). Homework solutions will be on reserve in the Science and Engineering library located at 38 Cummington Street.

Exams: There will be two in-class exams given at roughly equally spaced intervals throughout the course in addition to the final exam. All exams will be closed book. There will be NO makeup exams in this course. If you miss exam, you will receive a zero for the exam. The only valid excuse for missing an exam is a serious illness which must be certified by a doctor’s note.

The Final: You will be held responsible for all of the course material in the final exam.

Calculator: A calculator with graphing capabilities is required for this course. Calculators will be used as a tool to solve problems on the homeworks and exams. The official calculator recommended for the course is the TI-86 manufactured by Texas Instruments. Note: Unless otherwise specified on exams and homeworks, only exact solutions will be given full credit. For example, if the answer to a problem is $\sqrt{2}$ and you are not asked to provide an approximate solution then you will not receive full credit for writing down $1.414$.

Class Help: There are three options. The first is to see me or the TF during our office hours (or by appointment). The second is to go to the math department’s tutoring room in MCS 144 while the tutor is available (the schedule should be posted on the door of MCS 144). Finally, if you feel that you are falling far behind, you can make an appointment to receive tutoring by calling the University Resource Center (353-7077).

Grades: Your final grade is determined by three categories – the exams, the homework, and the final. Grades are based upon the formula:

Final Grade = $\frac{3}{8}$ (Exam Average) + $\frac{1}{4}$ (Homework Average) + $\frac{3}{8}$ (Final Exam)

The final grade is curved.
